

To find the spot on the shift lever that travels 1" in each direction.

1. Place a piece of cardboard or other stiff material behind the shift lever; make sure it is firmly against the shift lever shaft to the rear and resting on the floorboard braces on the bottom.
2. Draw a line on the cardboard where the shift lever goes across it.
3. Push the shift lever all the way up and draw another line.
4. Push the shift lever all the way down and draw another line.
5. The cardboard should look like this.

6. Measure between the lines to find where along the shift lever the lines are 1" above and 1" below the center line.
7. This is the point at which you attach the actuator.
